

WHY CHECK?

The comprehensive wellness platform Check™ by SilverVue® improves patient care by leveraging underutilized preventive assessments, such as the Annual Wellness Visit (AWV). The platform substantially contributes to additional practice revenue at no cost to patients and expedites MACRA reporting to ensure higher reimbursements.

IMPROVE PATIENT CARE

Check's cloud-based platform enables more efficient preventive care measures, which lead to improved patient health outcomes. Historically, these programs have required significant time and labor cost. Check empowers streamlined data collection, allowing clinicians to focus on patient care, not paperwork.

The digital Annual Wellness Visit establishes a patient's baseline health status. Responses may also trigger other ancillary assessments leading to improved patient health.

Clinicians who employ Check do more than treat patient complaints; they're diagnosing lurking medical conditions and providing their patients with a proactive approach to disease prevention.

OPTIMIZE ASSESSMENTS

Check's proprietary *Medical Necessity Engine* optimizes the use of diagnostic tests in an effort to protect patients from erroneous charges.

Medical staff compare a patient's medical conditions and recommended tests with the payer coverage to determine expected coverage *in real-time*.

These preventive services provide more patient-facing time, allowing clinicians to guide patients through their current health status without increasing out-of-pocket expenses.

INCREASE PRACTICE REVENUES

Check assists providers in taking full advantage of available Medicare reimbursements to substantially increase practice revenue. This unrealized income, often thousands in net-new revenue monthly, enables practitioners to scale their patient populations and provide employees with additional benefits.

According to CMS, only 17.7% of Medicare beneficiaries received an AWV in 2015. These assessments are free to the patient and Medicare* rewards practitioners for their time:

ASSESSMENT TYPE	TEST TIME	AVG REPAY
Annual Wellness Visit (AWV)	15 min	\$117 - 178
Mental Health	8 min	\$16 - 28
Neurocognitive	20 min	\$78

MACRA REPORTING

As a CMS-Approved Qualified Clinical Data Registry (QCDR), Check supports physicians with their MACRA compliance as well as MIPS reporting initiatives which contribute to increased future CMS reimbursements.

Check also provides multiple quality measures and clinical practice improvement activities that enhance a physician's composite MIPS score for continued repayment increases.
